

# TRAINING OPPORTUNITY

## FREE PNWD-IAI TRAINING: RECOGNIZING LIVE SCAN DISTORTION

**Presenter:** **Brianne Breedlove** Owner & Instructor—Uncover Forensics, LLC

The process of digitally capturing friction ridge impressions can often lead to distortion, the presence of false minutia, and the absence or “dropping” of true minutia. This lecture provides examples of such events and discusses visual queues and how to recognize when they occur, to better prepare a friction ridge examiner for explaining these occurrences in court. A case example of false minutiae will be covered with further discussion on how forensic units might handle conclusions when such occurrences are recognized.

*Registered students who attend this training will be emailed a certificate of completion, following the class.*

**DATE:** Tuesday, May 10, 2022, 1000—1100 PST

**LOCATION:** Online (a zoom training link will be provided following Registration)
